

Embase® on ProQuest Dialog: Medical Device Subheadings

Medical device information may be indexed with one of four subheadings: adverse device effect, device comparison, clinical trial, and device economics. These are displayed with the rest of the subject information in the document.

Subject	Embase; MEDLINE; stent -- adverse device effect -- stent dislodgement; adult; anatomy; aorta arch; aorta coarctation (major); balloon dilatation;
----------------	--

You can select the device subheadings from the device tab of the thesaurus Qualifiers page:

At the moment, device subheadings can be searched with only the full form of the subheading, e.g. EMB(STENT -- ADVERSE DEVICE EFFECT). The abbreviation will be made searchable in our next release.
